

Additional reading

Americans today are experiencing the biggest energy cost increases in the history of our country. We are reminded of it almost daily at the gas pumps. These same increases are also affecting us at home, with utility bills tripling in the last 10 years. The residents of Pennsylvania and many other states are faced with an additional concern as electricity deregulations are going through their final stages in 2008-09. The projections based on what other states have already experienced are for 30% increases in the cost of electricity for our homes.

Studies from The Environmental Protection Agency and The Department Of Energy show that the average house, including many new homes are loosing 25% or more of the energy that the owners pay for. This is clearly becoming an economic problem for families and a national resource and environmental issue as well. Smart homeowners are doing something about it, starting with having an independent energy assessment of their home before they spend any money on improvements or upgrades.

Residential Energy Solutions is dedicated to help you discover what changes can be made to help reduce energy loss and guard your income against these inevitable increases. With more than 30 years of home building experience, inspection services and home energy consulting, we are equipped to evaluate your home and search out the most cost effective solutions for lowering your utility bills.

With the "Energy Star house as a system" approach, energy saving is only one of the concerns. Improving air quality and controlling excess moisture are important as well. Advanced diagnostic testing and computer modeling allows us to establish the air infiltration rate and the source of that air. Establishing the proper exchange rate and a controlled fresh air replacement source is one of the best ways to reduce indoor air pollutants and also help control moisture levels in you home.

Reduced Utility bills, improved comfort and a healthier living environment are 3 great reasons for having *Residential Energy Solutions* do an energy assessment on your home. We also firmly believe that it is one of the first and most effective ways to make your home greener.
